look
at the
KINSMAN

BEFORE YOU BUY ANY ORGAN... ask to see the inside!

One look at the interior of a Kinsman organ will convince you: There's precision, simplicity of design...low-cost maintenance and reliability since one day ago.

From advanced tone generation systems employing new Comptonics by O.E., to standard-type circuitry and modular construction, Kinsman music does provide the "Piano Tone" (Patented). And, you don't have to "torture" a Kinsman. It will stay in tune, repeat down, or flat on the back...in fact, through almost any rough handling.

Add to this the exclusive Kinsman "Rhythmic King," a built-in component that automatically produces just about all of 37 different drum rhythm arrangements. Beyond a doubt, Kinsman is the most versatile organ ever produced for schools and institutions. No traditional organ can do the comparison for sound, or sustained use.

Charming styling, rugged construction and reduced weight make this fine organ especially practical to move about. Use it in Sunday and Music Department classes as well as Vocal and Instrumental Departments.
